(54) Title: PERSONAL CARE APPARATUS WITH AN AUTOMATICALLY PIVOTABLE HEAD PART

(57) Abstract: In a personal care apparatus (1) having a main part (2) and a head part (3), the main part (2) is designed to be held in one hand, the head part (3) is pivotable relative to the main part (2) about an axis of pivot (26) and a return spring (55) is provided between the main part (2) and the head part (3), thus enabling the head part (3) to be pivotable by means of the return spring (55) in synchronization with varying displacing forces that act on the head part (3) in the course of a hair-cutting operation, and to be positionable by means of the return spring (55) in a defined rest position relative to the main part (2) when there are no displacing forces present.
